

Location Data Disclosure

Effective Date: April 2, 2026 | Pipework Solutions LLC | reellegends.app

This Location Data Disclosure explains how Reel Legends collects, uses, stores, and shares location data in connection with your use of the Service. This disclosure supplements our Privacy Policy.

1. What Location Data We Collect

Reel Legends collects location data in the following ways:

- **Photo EXIF Data:** When you submit a catch photo through the Service, the GPS coordinates embedded in the photo's EXIF metadata are extracted and stored. These coordinates represent where and when the photo was taken.
- **Tournament Boundary Verification:** GPS coordinates are used to verify that a catch was made within the designated tournament fishing area.

2. Why We Collect Location Data

Location data is collected for the following purposes:

- To verify the authenticity of submitted catches as required by tournament rules.
- To confirm that catches were made within tournament boundaries.
- To display catch location on tournament maps.
- To associate guide business locations with map pins for Pro/Guide subscribers.

3. How Location Data Is Used

- GPS coordinates from catch photos may be visible to tournament administrators, judges, and other tournament participants as proof of fishing location.
- Location data is used by judges and tournament managers to verify catch legitimacy.
- We do not use location data for advertising or sell it to third parties.

4. Your Device Location

Reel Legends does not require access to your device's real-time GPS location. Location data is captured solely through the EXIF metadata embedded in photos taken with a GPS-enabled device. To ensure location data is captured in your photos, enable location services for your camera app on your mobile device.

5. Enabling Location in Your Camera

- **iPhone:** Settings > Privacy & Security > Location Services > Camera > While Using the App.
- **Android:** Camera App > Settings > Location Tags > On.

Tournaments that require location verification will be unable to accept catches from photos without GPS data.

6. Data Sharing

Location data from catch submissions may be shared with:

- Tournament managers and judges for verification purposes.
- Other tournament participants as part of the public catch record.

We do not share precise location data with advertisers or third-party marketing companies.

7. Data Retention

Location data associated with catch submissions is retained as part of the catch record. If you delete a catch the associated location data is also deleted. Verified tournament catches retained for record-keeping purposes retain their associated location data.

8. Opting Out

You may disable location tagging in your camera app to prevent GPS coordinates from being embedded in your photos. However, tournaments that require location verification may reject catches without GPS data. This is at the discretion of the tournament director.
